

LAB ASSIGNMENT 2.2

NAME : B.GNANESWAR
HT NO : 2303A51T01

TASK 1 :

```
task.py > ...
1  def clean_sensor_data(sensor_data):
2      cleaned_data = [value for value in sensor_data if value >= 0]
3      return cleaned_data
4
5
6  sensor_data = [25, -3, 18, -7, 0, 42, -15, 30]
7
8  print("Before Cleaning:", sensor_data)
9
10 cleaned_data = clean_sensor_data(sensor_data)
11
12 print("After Cleaning:", cleaned_data)
13 |
```

OUT PUT :

```
PROBLEMS    OUTPUT    DEBUG CONSOLE    TERMINAL    PORTS    Python    +    ⌂    ⌂    ...    |    ⌂    X
/opt/homebrew/bin/python3 "/Users/bandarignaneshwar/Desktop/ai coding/2.2.py/task.py"
● bandarignaneshwar@BANDARI-MacBook-Air 2.2.py % /opt/homebrew/bin/python3 "/Users/bandarignaneshwar/Desktop/
ai coding/2.2.py/task.py"
  Before Cleaning: [25, -3, 18, -7, 0, 42, -15, 30]
  After Cleaning: [25, 18, 0, 42, 30]
○ bandarignaneshwar@BANDARI-MacBook-Air 2.2.py %
```

OBSERVATIONS : The code successfully cleans the sensor data by removing invalid negative values and prepares it for further processing or analysis.

TASK 2 :

```
task2.py > analyze_string
1 def analyze_string(text):
2     vowels = "aeiouAEIOU"
3     vowel_count = 0
4     consonant_count = 0
5     digit_count = 0
6
7     for char in text:
8         if char in vowels:
9             vowel_count += 1
0         elif char.isalpha():
1             consonant_count += 1
2         elif char.isdigit():
3             digit_count += 1
4
5     return vowel_count, consonant_count, digit_count
6
7
8 # Sample Inputs
9 sample_text_1 = "Hello World 123"
0 sample_text_2 = "AI2026 is Smart!"
1
2 # Function Calls and Output
3 print("Input:", sample_text_1)
4 print("Vowels, Consonants, Digits:", analyze_string(sample_text_1))
5
6 print("\nInput:", sample_text_2)
7 print("Vowels, Consonants, Digits:", analyze_string(sample_text_2))
```

OUTPUT :

PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS

Python + ⌂ ⌄ ⌁ ⌂ ⌃

```
/opt/homebrew/bin/python3 "/Users/bandarignaneshwar/Desktop/ai coding/2.2.py/task.py"
bandarignaneshwar@BANDARI-MacBook-Air 2.2.py % /opt/homebrew/bin/python3 "/Users/bandarignaneshwar/Desktop/
ai coding/2.2.py/task.py"
Before Cleaning: [25, -3, 18, -7, 0, 42, -15, 30]
After Cleaning: [25, 18, 0, 42, 30]
bandarignaneshwar@BANDARI-MacBook-Air 2.2.py %
```

OBSERVATION : The code efficiently analyzes a string and provides accurate character classification, making it suitable for text-analysis features and student-level applications

TASK 3 :

```
• task3.py > ...
1  def is_palindrome_gemini(text):
2      cleaned_text = ""
3
4      for char in text:
5          if char.isalnum():
6              cleaned_text += char.lower()
7
8      return cleaned_text == cleaned_text[::-1]
9
10
11 print(is_palindrome_gemini("Madam"))
12 print(is_palindrome_gemini("Hello"))
13 print(is_palindrome_gemini("A man, a plan, a canal Panama")) |
```

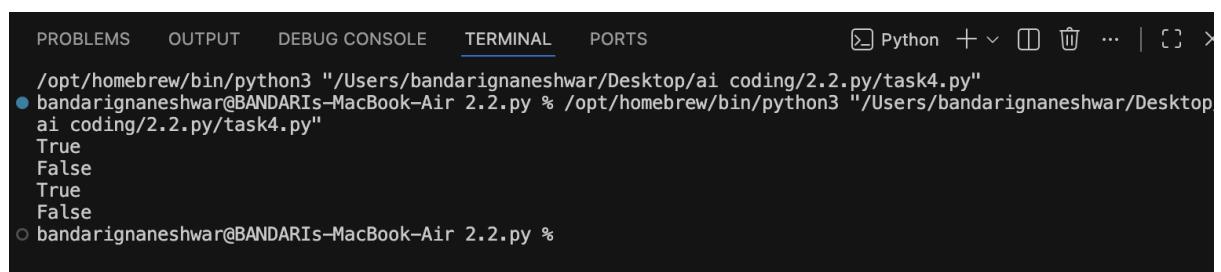

OUTPUT :

```
/opt/homebrew/bin/python3 "/Users/bandarignaneshwar/Desktop/ai coding/2.2.py/task3.py"
● bandarignaneshwar@BANDARI-MacBook-Air 2.2.py % /opt/homebrew/bin/python3 "/Users/bandarignaneshwar/Desktop/
ai coding/2.2.py/task3.py"
True
False
True
○ bandarignaneshwar@BANDARI-MacBook-Air 2.2.py %
```

TASK 4 :

```
1  def is_prime(number):
2      if number <= 1:
3          return False
4
5      for i in range(2, int(number ** 0.5) + 1):
6          if number % i == 0:
7              return False
8
9      return True
10
11
12 print(is_prime(7))
13 print(is_prime(10))
14 print(is_prime(2))
15 print(is_prime(1))
16
17
```

OUTPUT :

The screenshot shows a terminal window with the following content:

```
PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS Python + ⌂ ⌄ ⌅ ⌆ | [] >
/opt/homebrew/bin/python3 "/Users/bandarignaneshwar/Desktop/ai coding/2.2.py/task4.py"
